Level #01 – **C#**
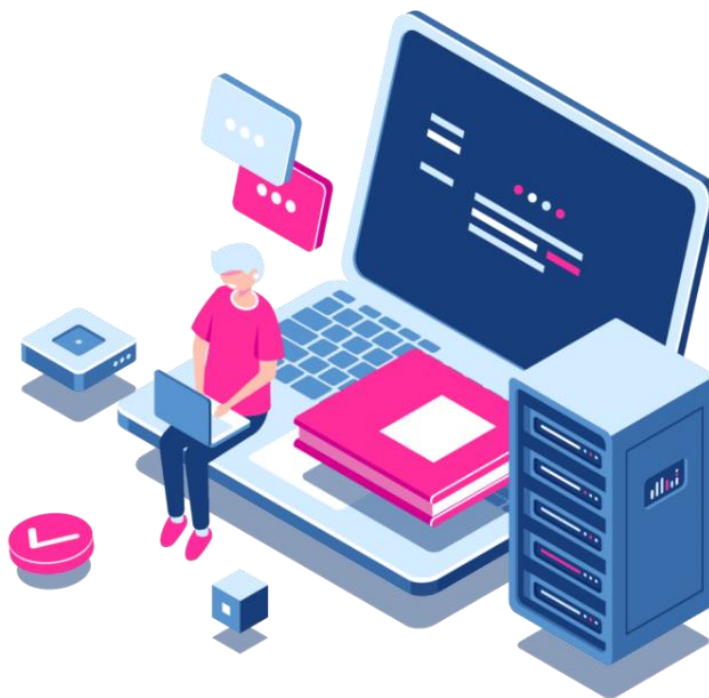

1. Counting Vowels

Write a C# program that prompts the user to enter a word or phrase. The program should then count and display the number of vowels (A, E, I, O, U) in the input.

- ☐ Prompt the user to enter a word or phrase.
- ☐ Use string manipulation techniques to count the vowels (both uppercase and lowercase).
- ☐ Display the count of vowels in the input.

2. String Splitter

Description: Create a C# program that asks the user to enter a comma-separated list of names. The program should split the input string and display each name on a separate line.

- ☐ Prompt the user to enter a comma-separated list of names (e.g., "Ahmed, Ali, Sara").
- ☐ Use string manipulation techniques to split the input and separate the names.
- ☐ Display each name on a separate line but all should be in upper case.
